

DELTA

for Duo-G2, Duo-G2D

Dual frequency satellite-based two-antenna system DELTAD is based on our TRIUMPH Technology implemented in our TRIUMPH Chip. For the first time in the GNSS history we offer up to 100 Hz RTK. The dual frequency code and carrier data from two antennas are processed to determine the three orientation angles and three dimensional position up to 100 times per second

216 channels of single or dual frequency GPS and Galileo in a small attractive, sturdy, and watertight box, which contains either Duo-G2 or Duo-G2D board.

The on-board power supply on the DELTAD receiver accepts any voltage from +4.5 to +35 volts and delivers clean filtered voltage where needed. This eliminates the risk of power contamination (ripples) that can be created when clean power is generated elsewhere and delivered to the board via cables. The DELTAD receiver also includes TriPad (two LEDs, ON/OFF and function button). In addition, the receiver comes with large amount of flash for data storage. The CAN interface in the DELTAD receiver is provided complete with all associated hardware and firmware, not just the CAN bus. The same is true with all the serial RS232/RS422 ports in our receiver. Simply stated, additional functions are not needed to incorporate any of our DELTAD Receiver in most applications.

In addition to timing strobe and event marker, the DELTAD receiver includes the option of complete IRIG timing system.
